

MATTHEW SPAULDING

AI Product Leader | Consumer Platforms, Mobile & Agentic Systems

Tampa, FL, USA | (727) 324-8369 | mrmattspaulding@gmail.com | linkedin.com/in/spauldingmatthew

PROFESSIONAL SUMMARY

AI and technology leader with 15+ years building production systems from concept to scale. Specializes in designing and shipping LLM-based applications combining retrieval, tool orchestration, and structured outputs. Track record of taking products from 0 → 1 through scale, leading both architecture and execution. Deep recent focus on agent-based systems, evaluation frameworks, and end-to-end AI workflows. Hands-on, product-oriented leader comfortable defining AI strategy and delivering production-ready features.

CORE COMPETENCIES

AI Systems: Anthropic Claude, OpenAI Codex, Google Gemini, LLM architecture, agent workflows, tool calling, RAG, evaluation frameworks, structured outputs, vector search, multi-agent systems, prompt orchestration, Claude Code-driven development, model selection, retrieval optimization

Technical: Multi-tenant SaaS, consumer and enterprise platforms, mobile-first product experiences, event-driven systems, distributed systems, real-time data pipelines, API design, microservices

Platform & Infrastructure: AWS, GCP, Azure, PostgreSQL, Redis, message queues, CI/CD, infrastructure-as-code, Docker, Kubernetes, Terraform, observability and monitoring, security and compliance practices

Product & Leadership: Product-market fit, roadmap prioritization, user adoption, cross-functional collaboration, team building (3 → 20+), hiring, mentoring, engineering culture, performance management

Programming: JavaScript, TypeScript, React, Node.js, Next.js, Python, SQL

PROFESSIONAL EXPERIENCE

Founder & AI Product Lead — Beesla

Apr 2025 – Present

- Built AI workflows on Anthropic Claude including agent orchestration, structured outputs, tool calling, and Claude Code-driven development practices
- Built AI-native platform converting natural language into structured workflows for role discovery and AI-driven actions
- Achieved 1M+ impressions across search engines and AI assistants, driving 80K+ unique users through programmatic SEO, AI-generated content, and structured outputs
- Designed end-to-end LLM systems and multi-step agent workflows including retrieval, tool orchestration, validation, and structured outputs
- Introduced evaluation and feedback loops to improve output quality, relevance, and system performance
- Architected distributed system supporting real-time queries, external data aggregation, and scalable AI pipelines

Cofounder & Founding Engineer — JobPhaze

Apr 2024 – Apr 2025

- Built early-stage SaaS platform in the HR space
- Designed system architecture across services, data pipelines, and cloud infrastructure

Cofounder & Founding Engineer — Weaver

Apr 2023 – Apr 2024

- Owned system architecture and technical direction for an early-stage dating app
- Designed backend systems and data models to support multi-client usage and growth

Software Engineering Manager — Spekit

Jan 2022 – Jul 2022

- Scaled engineering team from 3 to 20+ within Series A SaaS startup, owning hiring, eng standards, on-call culture, and code review practices
- Worked directly on system design and architectural decisions to support scale and rapid iteration
- Hired and mentored engineers maintaining high standards for code quality and reliability

Software Engineering Manager — PwC

Mar 2020 – Nov 2021

- Led development within ~60 person engineering organization delivering cloud-based enterprise platform
- Supported reliable production releases in complex, regulated environment
- Designed and guided system architecture across services for consistency and long-term scalability
- Modernized engineering practices including CI/CD, deployment workflows, and code review standards across the org

Software Engineering Manager — LoanLogics

Oct 2018 – Dec 2019

- Built and led team of 15 engineers delivering first version of cloud-based underwriting platform
- Built AWS infrastructure and CI/CD pipelines for reliable, repeatable releases
- Aligned architecture and delivery with customer and regulatory requirements
- Designed microservices architecture for independent team scaling and fault isolation across the underwriting platform

Tech Lead Software Engineer — iProcedures

Mar 2016 – Oct 2018

- Led development of real-time clinical platform for anesthesia and surgical monitoring, shipped on iPad in HIPAA-regulated healthcare environment
- Designed systems for capturing, processing, and visualizing live patient telemetry across desktop, tablet, and cloud
- Built real-time data pipelines and dashboards with offline tolerance and reliable cloud sync
- Owned architecture, deployment, and reliability for safety-critical healthcare software

EDUCATION**Master of Science in Computer Engineering**

Graduated 2011

University of South Florida, Tampa, FL
